

The **T3main®** is a comprehensive unified communications product with scalable and reliable voice messaging, unified messaging, and call routing environments. A unique single-platform approach supports a variety of location sizes, regional requirements and technology infrastructures, enabling organizations to communicate effectively.

T3main Fax allows you to offer fax capabilities as a part of your unified messaging solution. Incoming and outgoing faxes are managed via the desktop and users can also send documents from a web-based interface keeping faxes private and secure.

T3main Fax is included as a component of the T3main voice messaging system and requires minimal additional administrative support and no additional hardware.

**Benefits of Desktop Fax Management**

- Reduce paper clutter by sending faxes directly from the desktop and delivering them electronically to an email inbox.
- Secure sensitive information by allowing users to manage their faxes directly from the desktop and transmit unique fax IDs (CSIDs).
- View faxes remotely on a mobile device with a PDF viewer.
- File electronic fax records like email, simplifying record keeping.
- Reduce support requirements as T3main Fax is configured as a centralized fax server on the T3main enabling shared administration with all T3main features.

**Incoming Faxes - Features**

Fax-to-Email	Review fax information directly from the email inbox (including fax sender and number of pages), view fax messages onscreen with any TIFF or PDF image viewer, and forward fax messages to any email address.
Redirect Fax Messages	Redirect fax messages from the voicemail box to any fax machine when the email inbox is not available for fax viewing.
Fax Auto Print	Allow automatic printing of incoming faxes to a printer in a Microsoft® Windows® networked environment. The client connects using FTP (file transfer protocol) to the T3main server at pre-set intervals, downloads incoming faxes and prints them to a printer pre-defined for each user. Up to 30 printers can be defined in the network, each one associated with a printer ID. Users may also select a printer where their faxes will be printed.

**Outbound Faxes - Features**

Fax Queue	A web-based report displays the user's outbound faxes currently queued for transmission.
Fax Log	A web-based report displays the results of the user's outbound faxes. The fax log includes date, time, status, fax destination, account and billing codes as well as an attachment including the content of the fax.
Multiple recipients	A fax can be sent to multiple recipients, including email recipients who will receive the fax as a document attached to the email.
Confirmation email	A confirmation is delivered to the email inbox which includes date, time, status, fax destination, account and billing codes, as well as an attachment including the content of the fax.
Fax Settings	The mailbox owner may set personal outbound fax settings including number of times to retry fax delivery based on busy or no answer and how long to wait between each try, normal or fine quality, and input a billing code for client management.
Microsoft Office® Integration	T3main Fax can access Microsoft Office contacts for addressing faxes.
Security	When sending a fax the user may request delivery to a specific remote fax ID (CSID) to ensure the fax will only be transmitted to the correct recipient. This is useful in highly secured environments such as the legal and medical industry. In addition, each fax user is able to transmit a unique name and CSID on an outbound fax.
