

T3 Telecom Software, Inc.

Powering enterprise communications through integrated telephony solutions.

T3main Mobile Application

'Smart' access to voice messaging

T3main is an innovative and comprehensive telephony solution harnessing the best technologies in the telecommunications industry. A unique single-platform approach provides flexible voice and data capabilities to support a variety of location sizes, regional requirements and technology infrastructures.

Making sure employees have access to office systems is critical - when traveling, working from home, or even while mobile within the confines of the physical office space. Communications systems top the list, requiring voice mail and email to be accessible at any time from any locale.

We're moving beyond unified messaging and looking for ways to extend the use of the smart phone so that it becomes a true extension of the office phone. The T3 Mobile Application, installed on the mobile device, does just that by allowing the user to manage their communication easily and intuitively through a single device.

ONE TOUCH ACCESS

The T3 Mobile Application, available for Android™ and iOS™, provides one-touch access to the corporate voice messaging system through a native interface. Users no longer have to dial into the phone system and navigate key presses and voice commands. With the mobile application the user can manage voice mails, record presence-based greetings, and administer personal settings through the mobile device.

SINGLE NUMBER REACH

The mobile application also provides the user with a 'single number reach,' allowing for a corporate identity to be maintained even when using the mobile device. Outgoing phone calls are routed through the corporate phone system masking the mobile number, displaying the office number as the caller ID. Incoming calls to the office extension can be received on the mobile device and the user can screen or record the call, as well as transfer the call to another extension or back to the physical office phone.

FEATURES

Access to all new, saved, and deleted voice messages and faxes.

Administration of the voice mail box, including changing recorded name and password, as well as new user voice mail box set up.

Presence-based greeting management including default, busy, out of office, extended absence.

Deliver internal messages including flagging for future delivery, priority, confidential and return receipt notification.

Single-number reach.

One touch access to DND (do-not-disturb).

Outbound calls through the office phone system, using both call-through and call-back methods.
