

T3 Telecom Software, Inc.

Powering enterprise communications through integrated telephony solutions.

T3main Networking

Transparent, Networked Systems for
Advanced Telephony Applications

T3main is an innovative and comprehensive telephony solution harnessing the best technologies in the telecommunications industry. A unique single-platform approach provides flexible voice and data capabilities to support a variety of location sizes, regional requirements and technology infrastructures.

Unique networking capabilities allow multi-site companies to standardize on one solution for their messaging needs. Through T3main's distributed architecture and proprietary networking protocol, transparent systems can be created across multiple locations to effectively utilize network resources.

T3main Networking Advantages

- Users have one common directory.
- Support for name/greeting/group/class of service across the network.
- AMIS (Audio Messaging Interchange Specification), VPIM (Voice Profile for Internet Mail) and T3main's own proprietary networking are supported to accommodate multi-site environments with multiple voice mail servers (T3main and non-T3main systems).
- Redundancy ensures that if one access point fails, mailboxes are still accessible.

T3main removes the dependency of voice mail on the PBX, optimizing bandwidth and reducing internal network traffic in multi-site organizations.

Your Business Needs and Challenges

- Multiple, geographically remote sites
- Multiple PBX environments
- Independent, local administration
- Users that communicate through voicemail
- A PBX infrastructure reaching its maximum capacity

The T3main Solution

Provides a network of independent T3main units that communicate with each other over a proprietary IP protocol.

- Low cost and easy implementation
- Generates minimal network traffic
- Transparent voice mail communication between sites
- Local administration
- Local user database
- Local points of presence
- Immediate transfer of messages (offline)
- Plays up-to-date name and greeting of network mailbox
- Inherits network class of service
- Shared directory assistance
- Transfer to network extensions
- Follow-Me
